Anesthesia Services for Gastrointestinal Endoscopic Procedures

Policy

University Health Alliance (UHA) will reimburse for anesthesia services for gastrointestinal endoscopic procedures when it is determined to be medically necessary and when it meets the medical criteria guidelines (subject to limitations and exclusions) indicated below.

II. Criteria/Guidelines

A. Monitored anesthesia care (MAC), regional anesthesia or general anesthesia are covered (subject to Limitations/Exclusions and Administrative Guidelines) for endoscopic procedures when one of the following indications is present.

1. ASA P3 or P4 (see Appendix) patient with increased risk for complications due to one or more of the following conditions:
   a. Morbid obesity:
      i. BMI greater than or equal to 40
      ii. BMI greater than or equal to 35 and significant co-morbid conditions, e.g., coronary artery disease, diabetes mellitus, high blood pressure, abnormal airway findings
   b. Cardiac disease:
      i. Cardiac disease that is clinically significant and for which the patient is receiving treatment, e.g., coronary artery disease, valvular heart disease, congestive heart failure, arrhythmia
      ii. History of myocardial infarction, angioplasty, coronary stents, coronary artery bypass graft surgery, pacemaker, automatic implanted cardioverter defibrillator
   c. Kidney disease:
      i. End stage renal disease
      ii. Chronic kidney disease requiring the routine care of a nephrologist
   d. Neurologic disorders:
      i. History of stroke or transient ischemic attack requiring hospitalization and/or an evaluation and treatment by a neurologist
      ii. Severe neuromuscular disorder, e.g., Parkinson’s disease, amyotrophic lateral sclerosis, multiple sclerosis, muscular dystrophy
   e. Respiratory disease:
      i. Respiratory disease that is clinically significant and for which the patient is receiving chronic daily treatment with medication and/or oxygen, e.g., chronic obstructive pulmonary disease, moderate persistent asthma, interstitial lung disease, pulmonary hypertension
      ii. Documented obstructive sleep apnea requiring treatment with a positive airway pressure or oral device
f. Psychiatric disorder:

Chronic severe psychiatric disorder e.g., schizophrenia, bipolar disorder major depressive disorder

g. Patient has increased risk of aspiration due to foreign body, retained food, gastroparesis, achalasia or ascites

2. Increased risk due to prolonged or therapeutic endoscopic procedure requiring deep sedation, e.g., endoscopic retrograde cholangiopancreatography, balloon enteroscopy, foreign body extraction from the upper gastrointestinal tract, percutaneous endoscopic gastrojejunostomy and direct percutaneous jejuno-stomy, esophageal stenting, endoscopic mucosal resection of the upper gastrointestinal tract, esophageal ablation procedures, endoscopic ultrasound of the upper GI tract and colonic stenting. The combination of an upper endoscopy and colonoscopy is not a prolonged procedure requiring an anesthesia service.

3. Problems with sedation

a. Difficulty or anticipated difficulty with sedation due to one or more of the following conditions:

i. Chronic treatment with opioid analgesics.

ii. Chronic treatment with benzodiazepines in excess of occasional or nightly anxiolytics or sleeping medication.

iii. Chronic and significant substance abuse/dependence (not including marijuana) documented by the primary care physician in the patient’s medical records.

iv. Alcohol abuse/dependence, i.e., greater than 16 standard drinks per week in men or 10 standard drinks per week in women documented by the primary care physician in the patient’s medical records.

v. Uncooperative or agitated patient, e.g., due to dementia, organic brain disease

vi. Documented history of being difficult to sedate during a prior procedure (e.g., an anesthesiologist or CRNA was urgently consulted, the patient was very uncomfortable, or a large dose of sedation was required).

b. Allergy to fentanyl and/or midazolam which is documented in the patient’s medical records or in a prior anesthesia record or post-op report. Allergy to other narcotic analgesics or benzodiazepines is not a high risk indication for an anesthesia service. Generally speaking nausea and/or vomiting following an anesthetic, sedation, or procedure, for which fentanyl and/or midazolam were given, are not indications for an anesthesia service for endoscopy. However, an anesthesia service may be required for patients with prolonged vomiting requiring hospitalization or an extended outpatient stay, following an anesthetic, sedation, or procedure, for which fentanyl and/or midazolam were administered. Such prolonged vomiting must be documented by the primary care physician in the patient’s medical record, or in a prior anesthesia record or post-operative report.

c. History of severe problems with anesthesia and sedation (e.g., malignant hyperthermia, difficult intubation, difficult mask ventilation) which is documented by the primary care physician in the patient’s medical record, or in a prior anesthesia record or post-op report.

4. Risk of airway obstruction

a. Increased risk of airway obstruction as determined, prior to the day of the procedure, by a specialist qualified to make such a determination in a patient who:
i. is expected to require more than moderate procedural sedation; and

ii. is at increased risk for sedation due to obesity with a BMI of 35 or more, or an above listed medical condition; or

iii. will be having a prolonged procedure (not including a combined upper endoscopy and colonoscopy).

b. Documented history of tracheal stenosis or previous tracheostomy or radiation to the neck

5. Less than 18 years of age or 70 years of age and older

6. Pregnancy

B. **NOTE:**

This UHA payment policy is a guide to coverage, the need for prior authorization and other administrative directives. It is not meant to provide instruction in the practice of medicine and it should not deter a provider from expressing his/her judgment.

Even though this payment policy may indicate that a particular service or supply is considered covered, specific provider contract terms and/or members’ individual benefit plans may apply, and this policy is not a guarantee of payment. UHA reserves the right to apply this payment policy to all UHA companies and subsidiaries.

UHA understands that opinions about and approaches to clinical problems may vary. Questions concerning medical necessity (see Hawaii Revised Statutes §432E-1.4) are welcome. A provider may request that UHA reconsider the application of the medical necessity criteria in light of any supporting documentation.

### III. Limitations/Exclusions

A. The routine use of anesthesia services without supporting documentation is not covered for the following:

1. Procedural anxiety, situational anxiety or severe anxiety with respect to an endoscopic procedure.

2. Patients with a low pain threshold.

3. Anticipated requirement for “deep sedation” or general anesthesia in a routine endoscopic procedure in a low risk patient, with no prior history of difficulty with sedation.

4. Expected consequences of routine gastrointestinal preparation, e.g., mild volume depletion from the nothing by mouth (NPO) status or colonoscopy prep.

5. Anticipated difficulty to sedate without supporting documentation.

6. The occurrence of partial airway obstruction or hemodynamic instability secondary to anesthesia or sedation administered by an anesthesiologist or CRNA is not an indication for anesthesia services.

### IV. Administrative Guidelines

A. Prior authorization is required and must be obtained by the provider performing the endoscopy procedure. For some providers, the prior authorization requirement may be waived under UHA’s discretion.
1. When prior authorization is required, documentation from the medical record explaining the high risk indicators, previous treatment, current medications and patient response must be included. See Criteria/Guidelines and Limitations/Exclusions.

2. Anesthesiology claims are still subject to the high risk criteria system edits and billing requirements. Claims will not automatically paif if the thigh risk criteria re not met. Documentation supporting high risk criteria should be legible, maintained in the patient’s medical record, and available upon request.

B. To request prior authorization, please go to UHA’s website at www.uhahealth.com/page/prior-authorization-forms to submit via online.

1. When prior authorization is waived, documentation should be legible, maintained in the patient’s medical record and must be made available to UHA upon request. UHA will from time to time perform retrospective reviews using the above criteria to validate if services rendered meet payment determination criteria.

C. Member Agreement of Financial Responsibility - If there is no “high risk indication” for an anesthesia service, and the member requests anesthesia services from an anesthesiologist or certified registered nurse anesthetist (CRNA), or the endoscopist routinely requires an anesthesia service, the member should complete and sign the Agreement of Financial Responsibility at least 24 hours prior to the procedure. The patient must be informed of the financial implications. UHA will process the claim to indicate member responsibility for payment for this separate anesthesia service. The Member Agreement of Financial Responsibility needs to be kept on file by the endoscopist and anesthesia provider. If the Member Agreement of Financial Responsibility is completed on the day of service, UHA will not consider it to be valid and the patient will not be financially responsible for the anesthesia service.

D. ASA CLASSIFICATON

P1 - A normal healthy patient

P2 - A patient with mild systemic disease

P3 - A patient with severe systemic disease

P4 - A patient with severe systemic disease that is a constant threat to life

P5 - A moribund patient who is not expected to survive without the operation

E. P6 - A declared brain-dead patient whose organs are being removed for donor purposes
